

Roy Pereira

Senior Product Manager shipping a CE-marked medical device used by patients managing chronic conditions at home. *The connector between people and possibilities* — building digital health with empathy at scale.

— THE CONNECTOR —

*
01
—
WHO

I help digital health teams ship things patients actually trust. Empathy first, then the roadmap.

01 · DOMAIN

Digital health

Remote patient monitoring, chronic-condition care, MDR-regulated software as a medical device.

02 · CRAFT

Product & UX

iOS HIG, Material 3, Liquid Glass. A PM who prototypes in Figma and reads the codebase.

03 · SUPERPOWER

Connecting people, across cultures

Coordinate product across teams in India, Japan, US, Mexico & NL. Async-first written discipline, cultural calibration, the patience to know a "yes" isn't always a yes.

PROOF

Each strength, one line of evidence. No fluff.

→ 01

● AI-native operating

SIGNATURE

Claude Code daily — for UX prototypes, PRDs, iOS debugging, multi-agent automation. The work that used to take a PM, an engineer, and a designer two weeks now takes me a day.

→ 02

● Delivery & execution

SIGNATURE

Shipped a multi-agent Linear triage and RCA pipeline on GitHub Actions — polls 14 teams every 15 minutes, classifies tickets, posts code-level root-cause analysis straight onto the ticket.

→ 03

● Roadmap & prioritization

SIGNATURE

Helped take a CE-marked SaMD from monthly to weekly releases — coordinating a single iOS/Android codebase across 5 product teams under MDR. Used by ~70% of Dutch hospitals.

→ 04	• Stakeholder management SIGNATURE	Authored the shared release process aligning developers, testers, designers and POs across 5 teams — the doc people link to in Slack when there's ambiguity. Now onboarding for every new hire.	↗
→ 05	• Cross-cultural coordination SIGNATURE	Ship product across teams in India, Japan, US, Mexico & NL. Async-first written discipline, cultural calibration, and the patience to know a "yes" isn't always a yes.	↗
→ 06	• Agile transformation SIGNATURE	Co-led a 100+ engineer org from chapter-based Scrum to Team Topologies value streams running flow-based Kanban — and took the release cadence from monthly to weekly on a CE-marked SaMD.	↗
→ 07	• Technical fluency SOLID · GROWING	Full-stack and iOS background — Swift, React/Node, SQL, CI/CD. A PM who reads the code, prototypes screens, and ships PRs alongside engineers.	↗
→ 08	• Product strategy & vision SOLID · GROWING	Reframed onboarding for OMRON Connect's "continue without account" path — benefit-first UX writing that respected privacy, drafted in Claude, refined in Figma.	↗
→ 09	• Healthcare domain SOLID · GROWING	Shipping MDR-compliant SaMD across 150+ conditions, 11 countries, and 25M+ patient registrations. Fluent in RPM, chronic-condition care, clinician-patient handoff.	↗
→ 10	• Discovery & user research SOLID · GROWING	Audited OMRON Connect data flows from the patient's perspective to surface privacy decisions worth raising in-app.	↗
→ 11	• Data & analytics SUPPORTING	Firebase, Mixpanel, BigQuery as a working PM toolkit — instrumenting and querying flows directly, not waiting on handoffs.	↗

STACK

A typical day, re-tooled.

I work with Claude Code daily. PRDs that took half a day take an hour. Screens that needed a designer's queue ship the same morning. iOS bugs get triaged before standup. The PM workflow rebuilt around a tool that compounds.

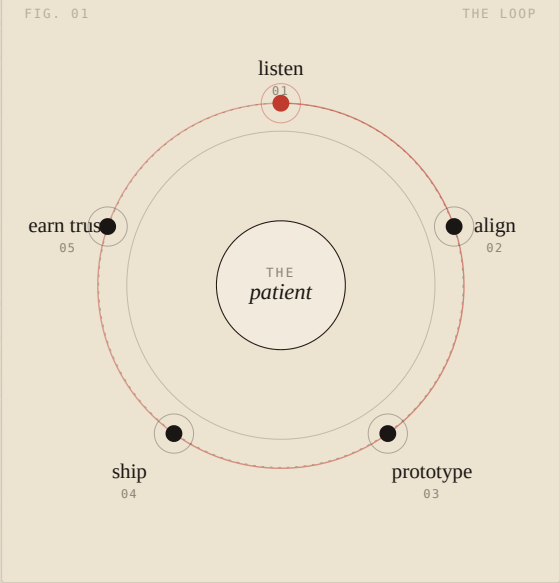

→ MORNING	Draft PRDs & specs	Claude Code · Notion · Linear	→ MIDDAY	Prototype UX flows	Claude · Figma · iOS HIG
→ AFTERNOON	Debug & ship code	Claude Code · Xcode · Swift	→ EVENING	Run automations	Claude · GitHub Actions · BigQuery
→ ALWAYS	Read the codebase	Claude Code · GitHub · grep, like an engineer	→ ALWAYS	Talk to patients	Voice · transcript → Claude for synthesis

Most PMs spent 2025 writing PRDs about AI features. I spent 2025 operating with AI — and the output looks different.

Every cycle earns the next.

A patient interview reframes the problem. Shared understanding aligns five teams. A prototype turns the insight tangible. The ship improves an outcome.

And the trust earned by shipping something useful opens the next conversation — deeper than the last. That's empathy at scale.

Four things I built recently. All shipped.

CASE · 01 — AUTOMATION

Linear triage & RCA pipeline

Multi-agent system that polls Linear every 15 minutes, classifies tickets, routes them to the right of 14 teams, and posts code-level root-cause analysis straight onto the ticket.

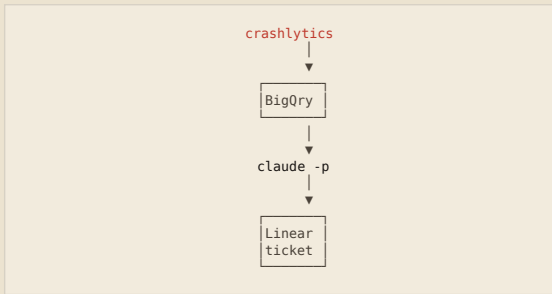

GH ACTIONS · CLAUDE · OCTOKIT → SHIPPED

CASE · 02 — PROCESS

5-team release process for a CE-marked SaMD

Authored the source-of-truth release doc coordinating 5 product teams on a single iOS/Android codebase — the playbook that lets us ship weekly (from monthly) under full MDR compliance. The doc people link to in Slack when there's ambiguity.

PROCESS · MDR · SCRUM → SHIPPED

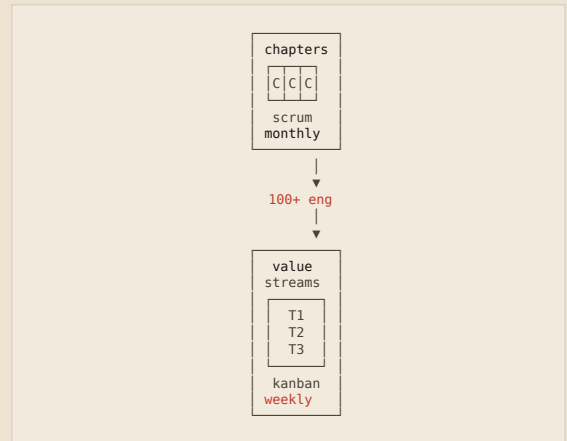

Crashlytics investigation pipeline

Daily headless Claude run that pulls new fatal crashes from BigQuery, reads the iOS codebase, and files a draft Linear ticket with a proposed fix — before anyone's even at their desk.

BIGQUERY · CLAUDE CODE · SWIFT

→ SHIPPED

Agile transformation, 100+ engineers

Co-led a global engineering org from chapter-based Scrum to Team Topologies value streams running flow-based Kanban. Outcome that stuck: release cadence went from monthly to weekly on the CE-marked app.

TEAM TOPOLOGIES · KANBAN · ORG DESIGN

→ SHIPPED

Master in agile transformation and experienced product manager.
